### COMMISSIONED WORK

\* I was recommended to work in tandem with peers majoring in industrial design, transportation design and product design then assigned as co-lead of the course to support and inspire students to think outside of their creative box in order to have me construct a full look to be presented alongside multiple automobiles and other tech based products. I incorporated detachable magnetic closures and 3d printed elements as a collaboration on one main project for Cadillac, while offering several teams feedback and inspirations for several of their industrial and technical designs.

### CURRENT EXPERIENCE

\* One of a select few students chosen to participate in the Old Navy Mentorship Program during my junior and senior year. I met with a mentor on a one to one basis who was able to offer me feedback on my designs and valued my feedback on various aspects of the design position. I was invited to sit in on fittings, speak with senior designers, and attend their seasonal launch presentation gaining hands-on experience of the corporate fashion industry.

\* 2025 Cadillac brand collaboration

### EDUCATION AND TRAINING
